Apurba Pokharel 11627243

Requirement One

The optimal policy generated is:

17.9	20	 16.1	 13.38	11.94
15.81	16.81	I 0	10.46	10.38
13.85	14.25	11.11	9 . 66	9.11
12.07	Car	10.52	9.09	8.09
10.76 	10.49	 9.34 	 8.26 	7.33

Requirement Two

The optimal policy generated is:

18.06	 	20.18	 	24.2	 	30	 	26 . 9
15.75		15 . 84		0		25 . 27		23.82
13.88	I	14.68		16.81		21.49		20.92
12.39		Car		15.99		18.46		18.28
11.29 		12.66		14.26		15.94 		16.35

Requirement Three

The optimal policy generated is:

17.9	20	22.4	30	26.9
15.81	16.81	0	23.62	23.52
13.93	14.68	15.77	20.17	20.46
12.29	Car	15.04	17.37	17.76
10.96	11.94	13.44	15.05	15.88

Requirement Four

- a. Showing the optimal policy for 1000 iterations is done in the code output below. Kindly refer there.
- b. The episodes ran for 1000 times.

Since a second request is only generated 60% of the time we have two requests for 600 episodes.

Out of these 600 episodes there is only a 30% of probability when a premium customer is generated i.e 180 times.

So,

There was a premium and a regular customer generated 179 times. The fraction of selection of premium over regular was 105 / 179, i.e 58% of the times. (Best result I got, in the code pdf below I have 51% result)
